DEFINISSE™ classic peel

EN: Chemical peeling solution, 50 ml bottle

DE: Chemische Peeling-Lösung, 50 ml Flasche

FR: Solution de peeling chimique, Flacon de 50 ml

IT: Soluzione per peeling chimico, Flacone da 50 ml

DESCRIZIONE DEL PRODOTTO

Definisse classic peel è un dispositivo medico indicato per la soluzionazione di peeling (o peeling) delle strati superficiali dell'epidermide. Il prodotto contiene una special combinazione di ingredienti: salicilico acido e piruvico. L'acido saliclico esercita un efficace azione cheratotica negli strati superficiali dell'epidermide, che permette una penetrazione più profonda del succo piruvico. L'importante azione sinergica di questi componenti ha permesso di ridurre la concentrazione d'uso e di limitare quindi i danni arrecati alla struttura cutanea trattata.

INDICAZIONI

Definisse classic peel è un dispositivo medico indicato per favorire l'esfoliazione e il rinnovamento cutaneo delle strati superficiali della pelle. È raccomandato in caso di: • lesioni da fotodavvele (tatuaggio da cui rughe, lentigo, chiazze); • acne, seborrea, rosacea, eritema, eczema; • comedone, acne, rosacea post-peeling.

INGREDIENTI

Succo salicilico, acido piruvico, acido trans-retinoico, alcool denaturato.

MODALITÀ DI UTILIZZO E PRECAUZIONI

Il prodotto deve essere applicato da personale esperto che conosca le procedure corrette per l'esecuzione della varia fascia di trattamento topico cui il paziente si sottopone a casa.

• lesioni dall'acne-tinea tipo-wrinkles;

• foto-aging lesions (including wrinkles, lentigo, keratosis);

• comedonal acne, post-peeling skin lesions

The treatment is also a useful aid in the prevention of papular pustular acne due to the sun-tanning action carried out by the product.

INDICAZIONI

Succo salicilico, acido piruvico, acido trans-retinoico, alcool denaturato.

HOW TO USE AND PRECAUTIONS

The applications must be carried out by expert personnel who know the correct procedures of the various phases of peeling treatment in accordance with local legislation.

Before applying the product, it is necessary to assess the treatment performed by the patient, as it is advisable to suspend all products with an exfoliating action at least 15 days before performing the treatment.

It is recommended to protect the patient's eyes with gaze or contact lenses made in physiological solution, to protect cutaneous nevi and/or sensitive skin areas or skin lesions with barrier products.

Avoid applying the product in the sensitive areas described above.

1. Remove all makeup.

2. Cleanse and adjust the pH of the skin, for example with Definisse dry skin pre-peel and/or Definisse oily skin pre-peel.

3. Pour the necessary quantity of product for the treatment into a bowl, usually 3 to 5 ml.

4. Apply the product on the skin using a brush, spreading it evenly over the area to be treated, taking care not to allow the device to drip onto areas where treatment is not planned, and avoiding contact with the buccal mucous, eyes and sensitive areas.

The patient must report a brief and transient burning sensation after the application of the gel.

5. After 1-2 minutes of application the peeling is complete.

6. Remove the excess product with a cotton pad.

7. Apply the product to the skin using a brush, spreading it evenly over the area to be treated, taking care not to allow the device to drip onto areas where treatment is not planned, and avoiding contact with the buccal mucous, eyes and sensitive areas.

The patient must report a brief and transient burning sensation after the application of the gel.

8. Following it is possible to apply a soothing cream without irritating the patient's skin with water.

After the treatment, there may be the onset of erythema, desquamation and pigmentation alterations. Advise the patient not to expose the skin to the sun without adequate protection or to not remove or try to manually pull off any peeling skin or scabs.

Peeling phase:

As exfoliation causes thinning of the superficial layers of the epidermis, it is also important to take adequate precautions on the following days to avoid the peeling (post-peeling) in order to reduce any side effects.

Use of the following is therefore recommended:

• adequate sun protection during the day;

• the application of moisturizing, re-epithelializing products, and of gentle cleansers;

The patient will perceive a sensation of bruise transitory on the skin, followed by a slight redness and/or edematous reaction.

The patient must report a sensation of heat and/or pain after application of the product.

8. Once the patient has been informed about the use of the product, he can immediately apply the product to the skin.

9. After the treatment, the patient can apply the product to the skin.

10. After the treatment, the patient can apply the product to the skin.

11. After the treatment, the patient can apply the product to the skin.

12. After the treatment, the patient can apply the product to the skin.
